

ABSTRACT**METHOD FOR RESOLVING MEETING CONFLICTS FOR WITHIN AN
ELECTRONIC CALENDAR APPLICATION**

15
A method for resolving meeting conflicts for an electronic calendar application is disclosed. After receiving a request for setting a first meeting schedule for a first meeting, an electronic calendar application sets a first meeting schedule and a first meeting priority number associated with the first meeting. In response to a request to set a second meeting schedule for a second meeting, and the second meeting schedule conflicts with the first meeting schedule, the electronic calendar application determines whether a second meeting priority number associated with the second meeting is higher than the first meeting priority number associated with the first meeting. If the second meeting priority number is determined to be higher than the first meeting priority number, then the electronic calendar application overrides the first meeting schedule with the second meeting schedule. Next, the electronic calendar application informs a meeting scheduler of that first meeting that the first meeting has been overridden by the second meeting schedule.
